Subject: WEEE & RoHS Compliance

Dear Sir or Madam:

The purpose of this letter is to communicate Power Technology's commitment to comply with both the WEEE & RoHS directives as soon as possible. Here at Power Technology we are pleased to inform you we are building lead free/RoHS compliant products. However, we do use a few electronic components that do not yet have a RoHS compliant equivalent. Until we have a replacement for these parts, the best way to ensure compliance is to request RoHS compliance on your PO. We will make every effort to fill each request. If for some reason, we cannot offer your choice of laser product in a compliant form, you will be notified by the factory.

Our goal is to be fully compliant with RoHS and WEEE by the end of this year and it looks like we will reach that goal. To the best of our knowledge, only lead content in a few electronic components prevents our products from complying with the RoHS directive. As soon as we complete our goal of 100% Pb-free production we will announce our compliance. The changes to Pb-free/RoHS compliance will not in anyway change the functionality of our products. RoHS compliant product is marked on the product label, product instructions and in some cases the packaging itself.

To the best of our knowledge, the local reseller will be responsible for registering with the local government agency to comply with the WEEE legislation. In fact, we at Power Technology cannot register directly because we do not manufacture any products in the EU. The responsibility of WEEE registration falls on our resellers and distributors. Power Technology will assist our partners in Europe to fulfill the mandated registration by providing any necessary technical information about our products. Additionally, we are willing to accept return any of our product manufactured after July 1, 2006 for responsible recycling. Contact me personally for further details.

Sincerely,

A handwritten signature in black ink that reads "William Burgess".
